

COMPANY PROFILE ■ VÍTKOVICE IT SOLUTIONS a.s.

Leading system integrator focused on the delivery of own solutions for large and medium businesses and public sector.

VÍTKOVICE IT SOLUTIONS a.s. was established through the merger of IT companies owned by VÍTKOVICE MACHINERY GROUP (VÍTKOVICE ITS a. s., MEDIUM SOFT a. s., and Netprosys, s.r.o.). The merger objective was to create a strong IT company combining knowledge and references of the three existing IT companies as well as the power of a traditional engineering giant acting all over the world.

VÍTKOVICE IT SOLUTIONS employs an experienced team of professionals who can design a comprehensive solution for you that will demonstrably enable you to increase efficiency of your business. Based on such foundations we build long term partnerships with our customers. The company builds on top of two strategic pillars. The first is "System integration and security" and the second is "Information systems and communication technologies".

Since its establishment, the Company has been focused on the most effective setup of common communication and processes with the attention paid to the quality of provided services and two-way efficient communication with the customer. In a short time and based on the quality of its services, the company was able to get necessary ISO certificates and the certificate of the National Security Authority (NSA). Our goal is to improve and broaden of provided services based on new knowlegde and technologies continually.

PRODUCTS AND SERVICES ■

System Integration

The Company portfolio covers almost all services both in HW infrastructure and software application delivery. We employ consultants and offer their services for ICT strategy preparation and IS/IT development concept. We have expertise for providing services in the field of designing the concept of global architecture solutions as well as detailed architecture while we can implement efficiently the state-of-the-art technologies for integration of all systems. We also assume responsibility for the customer for defining requirements, selection of technologies, suppliers and we guarantee implementation and operation of the comprehensive solution.

Data Centers

Analysis and design of data center, building and supporting them, including possibility of virtual data centers and Cloud computing. Integral parts of data centers are the key areas such as virtualization, computing power, storage and backup, of course.

Infrastructure

Analysis and design of active and passive components of communication infrastructure, including detailed preparation of project documentation.

Security

Complex solutions from physical layer (camera systems, attendance systems), security of networks and environments, encryption and management of data access to biometrics and eID.

Software for Integrated Rescue System

Software for emergency call taking and management for the whole country. A comprehensive information system for Medical emergency services operational control, including dispatching. Systems for crisis management covering phases from preparation to operation.

SW for Supporting Manufacturing

Simulation analysis in development phase of engineering. Support for effective storing and splitting of metallurgical materials. Flexible planning of melting.

Project Management

In project management we are managing both large systems and smaller systems in network and communication technologies and low-voltage systems.
