*Adularia – Power station Yunnus Emere 2x 175 Mw, EPS protection*

## ELECTRIC FIRE ALARM

**Early detection, signalling and location of fire significantly increases safety**

VÍTKOVICE IT SOLUTIONS a.s. provides comprehensive solutions of fire alarm systems (EPS). Within small and large projects, we offer consulting, installation, maintenance and inspection according to the Ministry of Interior Decree No. 246/2001 Coll., on fire prevention and related legislation. Our goal is to ensure maximum security of a building and customer satisfaction. For this reason, we use only products from the best manufacturers and adapt our solutions to the financial and time possibilities of the client.

### HOW DOES EPS WORK?

EPS is an important part of fire protection system, which consists of the fire control panel, various types of detectors, and additional devices. In case of fire detection, EPS informs permanent attendance using acoustic and visual signalling, or directly calls the fire protection unit using remote transmission facilities. and vertically. Thanks to the use of parabolic antennas, the microwave beam and zones are precisely defined, and the MW barrier can thus be used for long detection zones.

### A WIDE RANGE OF EPS PRODUCTS AND SERVICES

Our company offers a broad portfolio of EPS fire alarm systems with an extensive range of detection technologies from the push-button and automatic alarms to special technologies, such as Laser detection cables.

**All accompanied by the following services:**

- Development of fire-safety design of the building
- Development of an authorized project documentation
- Delivery of equipment, including connection to PCO Rescue Service, (KTPO, ZOKT, OPPO)
- Installation, regular inspection and checking activities in accordance with applicable legislation, maintenance
- Programming and commissioning
- Integration with other security systems (ACS, EZP, CCTV)
- Technology from reputable manufacturers (Esser, Zetler, Siemens, Lites)
